

SENIOR WELLNESS

We all want our beloved pets to grow old with us. At Gem Veterinary Clinic our mission is to help you and your pets to enjoy this time together. To help accomplish this we recommend blood screening on a regular basis for pets that are over age 7.

One in four (25%) “healthy” senior pets have abnormalities in their blood work. These abnormalities can be early indicators of diseases that often can be treated if detected in time.

To help make this an easier and more affordable process we offer...

Basic Senior Screen (15% savings)

- Senior consultation
- Annual vaccinations and roundworm deworming (unless doctor has recommended otherwise)
- Arthritis evaluation
- Nutritional assessment
- Complete blood count
- Biochemical analysis

Comprehensive Senior Screen (15% savings)

- Basic Senior Screen (see above)
- Thyroid screening
- Urine evaluation

If your pet has abnormalities detected on the blood screen the doctor will recommend the appropriate course of action to help your pet return to health and live a long happy life.

We offer these packages for your convenience and to ensure that your pet is receiving the appropriate care and early detection necessary to stay healthy and happy. Your pet's health is extremely important to us. If you have any questions or concerns please feel free to ask.
